

# Asbestos Removal Checklist

After asbestos has been removed from your home, whether DIY or professionally removed, you should complete the following steps to ensure the safety of anyone who uses the premises.

## ✓ Professional Clearance Inspection

A professional clearance inspection is an essential, independent check by a licensed assessor to confirm the safe and complete removal of asbestos.

## ✓ Visual Inspection for Asbestos Waste

Visual inspection offers a direct, hands-on evaluation of a site's cleanliness and safety, ensuring all asbestos materials are completely removed to protect occupants' well-being.

## ✓ Air Quality Testing

Air quality testing is vital to confirm the absence of airborne asbestos fibres, ensuring the safety and successful decontamination of the workspace after asbestos removal.

## ✓ Review of Removal Area's Barriers and Containments

Air quality testing is vital to confirm the absence of airborne asbestos fibres, ensuring the safety and successful decontamination of the workspace after asbestos removal.

## ✓ Proper Waste Disposal Verification

Proper waste disposal verification ensures asbestos materials are safely handled and transported according to regulatory standards, minimising contamination risks.

## ✓ Ongoing Monitoring and Maintenance

Ongoing monitoring and maintenance after asbestos removal are crucial for detecting future issues and ensuring the continuous effectiveness of safety measures, thereby safeguarding occupant well-being.

## ✓ Educate and Inform Building Occupants

Educating and informing building occupants about the asbestos removal process and safety measures is crucial for ensuring their awareness and safety.

## ✓ Keeping Documentation

Maintaining documentation of the asbestos removal process provides a historical record that ensures compliance with safety regulations and aids in future building maintenance and legal matters.
